This policy does not apply to images required for the purposes of data collection and dissemination as authorized on an approved AUP and images of animals for public relations purposes, or any other public activity organized by Queen's University that does not fall under the auspices of the Animal Care & Use Program at Queen's University.

The UACC recognizes that the use of images can provide valuable information that facilitates learning and the delivery of information. However, images of animals in science in any of their potential settings may inadvertently result in privacy or security risks to those working with animals, to wild animals or habitat, and to the facilities housing these animals. Further, the reputation of the University and the Animal Care & Use Program may be negatively impacted if images are published out of context or in such a way that implies inconsistency with policy.

The widespread use of mobile devices equipped with photographic and recording capabilities facilitates almost anyone with access to animal areas to captu Tdb1(s(n).12 (d)-).3 (ie Tc 0.00405 w 0.25 0 TdTw 52340 T.1(l)

______) of restricted areas where animals are studied, held or housed.

Sharing any images of research or teaching animals for personal use is strictly prohibited (e.g.: to an individual, to a social media outlet or other public stage). The sharing of images with a malicious intent is a punishable offence.

For images intended for publication in large-scale media for the public such as newspapers, newscasts or documentaries, the individual must seek written pre-approval from the University Veterinarian who may consult with appropriate Queen's University media relations. Images must be reviewed prior to sharing to prevent inadvertent identification of people, animals, and locations as well as keeping confidential unpublished research information.
