## Course Description

This course is a survey of the topics in cognitive psychology. We will examine the basic processes involved in perception, attention, memory, representations, thinking, language and other topics. Cognition is far more complex than it appears. The simple act of answering a cell phone involves dozens of processes that you probably don't think about. Also, we'll learn about quirky things your brain does and have fun doing it!

Be prepared to read quite a bit and think in new ways about how we think, act and do everyday things. All material (in the textbook and the lectures) is fair game (see below for more details). You are responsible for all materials presented in class.
